The company is the biggest producer of fruits in Slovenia, especially apples, pears and peaches. All fruit is grown by the rules and requirements of integrated production. A winter cut in the plantations made on time is one of the first steps of thinning the flower buds and achieving the balance between growth and fertility. In the last five years the transformation from the narrow spindle to extended cut has begun. The purpose of this transformation is to increase the fertility and provide a greater part of first-class production the intense lighting in all parts of the crown should be provided.
